

Tullamarine Landfill Community Consultation Group
C/O Transpacific Cleanaway
41 Victory Road
CLARINDA, VIC, 3169

Dear TLCCG members,

Re: Action 250315_4

Action 250315_4: *Alistair to prepare a letter outlining all the Pollution Abatement Notices and other statutory conditions that EPA has on the site and the EPA's expectations of TPI.*

EPA currently has two active Pollution Abatement Notices (PAN)s relevant to the Tullamarine Closed Landfill.

The first is the Post Closure PAN issued on 4 December 2009, which includes:

- Groundwater quality management plan
- Liquid waste management plan
- Landfill gas management plan

This represents the overarching management requirement for the site and Transpacific Cleanaway are required to provide monitoring updates on all of these plans and implement actions.

The second is the PAN requiring Transpacific Cleanaway to undertake the LNAPL Extraction Trial. It requires:

- LNAPL Extraction Trial be undertaken, and a report provided by 8 July 2015
- Delivery of a Hydrogeological Assessment report also by 8 July 2015.

EPA intends to replace the PCPAN for Tullamarine, and has consulted the TLCCG on the draft PCPAN during 2014.

EPA is intending to formalise the replacement PCPAN for Tullamarine Landfill upon receipt of the Hydrogeological Assessment for the landfill, which will enable any requirements that follow from this to be included in this document.

Regards,

Alistair Nairn
